BALANCE

PRODUCT WITH SPECIFIC ACTION

- ~ Balances the metabolism
- ~ Strengthens the immune system
- ~ Reduces the phytotoxic effect of phytosanitary products

SPECIFICALLY STUDIED TO BALANCE THE PLANT'S VITAL PROCESSES

Balance is a mixture made up of an inoculum of mycorrhizal fungi, rhizosphere bacteria and yeast able to establish a symbiotic and occupation of ecological niche relationship with the roots to foster a microbiological balancing of the organic soil activity. The active ingredients of the plant extracts at low concentrations stimulate the metabolism and regulate plant nutrition. **TIS** (*Technology Integrated System*) applied to **Balance** regulates the physical functions of the plant when there are profound alterations in the *Electromagnetic Information Fields (EIF)*.

COMPOSITION

Organic amender, mycorrhizal fungi, rhizosphere bacteria.

- ~ Organic matrix (single, non-composted plant amender)
- ~ Mycorrhizae: 0.004%
- ~ Rhizosphere bacteria: (for example: *Acetobacter Pasteurianus*, *Lactobacillus casei*, *Pichia Kudriavzevii*, ...) 1×10^9 ufc/g

BALANCE

PRODUCT CONSERVATION

No specific conditions are required, but it is better if the product is protected from light. However, in order to achieve the best agronomic results, **Balance** should be used within **8 months** from its date of production (see lot on the package).

DISTRIBUTION TECHNIQUE AND HOW TO USE

ON THE GROUND: by fertigation with drip hose or spray bars for sprinkling with a nebulizer.

*To get the best result, use **Balance** before the irrigation cycle is completed in order to guarantee a direct exchange with the roots and the microbial activity helpful in the rhizosphere.*

Fill the fertigation tank with **Balance** and water according to your needs, then add the NaturMix **activator** (50 ml package) at a ratio of 2 ml/m³ and activate the mixer, leaving it running for 12 hours before distribution.

ON LEAVES: By sprinkling with atomizer or motor pump equipped with nozzle. Fill the sprayer with **Balance** and water according to your needs, then add the NaturMix **activator** (50 ml package) at a ratio of 2 ml/m³. Place a submersible centrifugal pump (200 L/min) inside and let it run for 12 hours before distribution.

APPLICATION DOSAGES

The indicative quantities per intervention are **2 L/ha** and the indicative interventions are every 7 to 10 days. We recommend that you contact our technicians for personalised protocols. There are no overdosing problems with **Balance**.

ACTIVATOR

The **activator** NaturMix is to be used every time the solution with water is prepared (dosage 2 ml/m³).

FIELD OF APPLICATION

In the open field and greenhouses:

- ~ Vegetable
- ~ Fruit
- ~ Floral and Ornamental
- ~ Seed

ADVANTAGES

- ~ Balances the plant's metabolism
- ~ Strengthens the immune system
- ~ Reduces the phytotoxic effect of phytosanitary products
- ~ Counteract the oxidative processes
- ~ Recover the biodiversity of the soil
- ~ Increase production while protecting the organoleptic properties of the agricultural products
- ~ Non-GMO - completely free of genes modified by genetic engineering techniques, as the raw materials used do not come from microorganisms or plants altered by these methods.
