

~ PLUS ~

PRODUCT WITH SPECIFIC ACTION

- To promote root activity (when replanting, in case of nutritional deficiencies induced by unbalances
 of the soil and less efficient root body)
- For the microbiological reprogramming of the soil when there are dominant pathogenic fungal loads in the soil

SPECIFICALLY STUDIED FOR REPLANTING AND IN CASES OF ROOT DISCOMFORT

Plus is an acqueous mycorrhizal fungi, rhizosphere bacteria, yeast and plant matrix extract-based mixture able to establish a symbiotic and occupation of ecological niche relationship with the roots to foster a microbiological balancing of the organic soil activity.

COMPOSITION

Organic amender, mycorrhizal fungi, rhizosphere bacteria.

- Organic matrix (single, non-composted plant amender)
- Mycorrhizae: 0.004%
- 🦴 Rhizosphere bacteria: (for example: Lactobacillus plantarum, Rhodopseudomonas palustris, Pichia Kudriavzevii) 1×10° ufc/g

PRODUCT CONSERVATION

No specific conditions are required, but it is better if the product is protected from light. However, in order to achieve the best agronomic results, Plus should be used within 8 months from its date of production (see lot on the package).

HOW TO USE

The product is recommended in the pre-replanting phase (bathing the seedlings in the seedling trays) and when planting via hose irrigation drop by drop or using a spray boom for sprinkling with nebulizers. Plus is used after completing irrigation with water only, to allow a direct exchange with the roots. A preharvest interval between the last application and consumption is not required.

APPLICATION DOSAGES

The indicative quantities per intervention are 2.5 l/100 l of water (bathing the seedlings) and 5 l/ha for planting, to which irrigation water is added. Multiple applications are recommended, depending on the type of crop, and we suggest that you contact the technicians to get targeted protocols. There are no overdosing problems with Plus.

FIELD OF APPLICATION

In the open field and greenhouses:

- Vegetable
- Fruit
- Floral and Ornamental
- Seed

*ADVANTAGES

- Microbiologically reprogramme the soil
- Regenerate soils exposed to intensive cycles
- \sim Improve rooting, the absorption of nutrients and resistance to water and climatic stress
- Reduce the time needed for soils to reconvert
- Improve the physical properties of the soil
- Counteract the oxidative processes
- Recover the biodiversity of the soil
- Make the nutritional substance bioavailable
- \sim Increase production while protecting the organoleptic properties of the agricultural products
- 🥆 Non-GMO completely free of genes modified by genetic engineering techniques, as the raw materials used do not come from microorganisms or plants altered by these methods.
